One Month, 500,000 Face Scans: How China Is Using A.I. to Profile a Minority

In a major ethical leap for the tech world, Chinese start-ups have built algorithms that the government uses to track members of a largely Muslim minority group.

ACADEMIC ACTIVITY

Papers Submitted to FAT ML (2015 - 2018)

1470 papers accepted in CVPR 2020

UNIVERSITY OF AMSTERDAM

Mandatory course since 2019:

*Fairness, Accountability,
Confidentiality and
Transparency in AI*

by

Dr. Maarten de Rijke

from the

*Information and Language
Processing Systems (ILPS-UvA)*

More FAT papers accepted in ACM FAccT 2018 - 2020

EVALUATION

FUNDAMENTAL COMPONENTS

FUNDAMENTAL COMPONENTS in A.I.

Types of data,

1. Numerical
2. Categorical
3. Images
4. Text
5. Location
6. Activity
7. Measurements
8. Video

Sources of data,

1. Datasets
2. Logs
3. Reports
4. Forms
5. Recordings
6. Photo Gallery
7. Consumption History
8. Declarations

Grouped by,

1. Person
2. Organization
3. Region
4. Purpose
5. Legal

1. Be generalizable to cover all projects.
2. Not be time intensive to apply. (15-30 mins)
3. Defined metrics which capture our goal.

14 Yes/No questions regarding data,

- Is the source of data/labels known?
- Is the dataset publicly available?
- Is the dataset published in a conference or journal?
- Is the data anonymized?
- Are infographics/graphs used to convey the analyses on the dataset?

17 Yes/No questions regarding model,

- Is a baseline model available for reference?
- Have traditional models been evaluated for reference?
- Is the model based on published research?
- Is the trained model publicly shared?
- Is the model published in a conference or journal?

13 Yes/No questions regarding deployment,

- Is there a human in the decision making process?
- Are the decisions made by the model analysed at regular intervals?
- Is the confidence score considered in the decision of the model?
- Is the prediction confidence shared in a decision report?
- Is the inference data stored for future review, analyses or modelling?

Fairness	Decisions are unbiased to identity features such as gender, race, nationality, sexual orientation, religion, political opinion, skin colour, education, address and age.
Accountability	Decisions should be traceable, reproducible and liable . All decisions and their consequences must be owned and explained by the decision maker or administrator of the decision maker.
Confidentiality	Personal information which can be used to identify individuals or communities must be secure and above intentional or accidental misuse.
Transparency	Understanding why a decision is made is key to establishing trust in the decision process. Accompanying decisions with explanations and analysis reports help understand the outcome.

3 Projects (2 within 510)

Project Name	FACT Score
ADA - Caladrius	41.98%
MCF Hackathon	32.10%
Philippines Typhoon	65.43%

Less than an hour to apply.

A hackathon project gets a lower **score** which makes sense. It was **easy to use** by the evaluators without any instructions.

The flood project evaluation was *mostly* unguided.
